

CHATGPT WILL RESHAPE SOCIETY

INDUSTRY TODAY

Microsoft 365 Copilot UI

Microsoft on 3/16 outlined its plans to bring artificial intelligence to its most recognizable productivity tools, including Outlook, PowerPoint, Excel and Word, with the promise of changing how millions do their work every day.

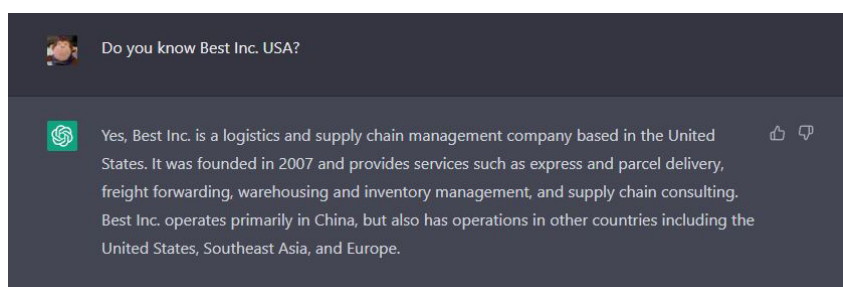

The company announced that Microsoft 365 users will soon be able to use what the company is calling an AI “Co-pilot,” which will help edit, summarize, create and compare documents. But don’t call it Clippy. The new features, which are built on the same technology that underpins ChatGPT, are far more powerful (and less anthropomorphized) than its wide-eyed, paperclip-shaped predecessor.

With the new features, users will be able to transcribe meeting notes during a Skype call, summarize long email threads to quickly draft suggested replies, request to create a specific chart in Excel, and turn a Word document into a PowerPoint presentation in seconds.

The news also comes two days after OpenAI, the company behind Microsoft’s artificial intelligence technology and the creator of ChatGPT, unveiled its next-generation model, GPT-4. The update has stunned many users in early tests and a company demo with its ability to draft lawsuits, pass standardized exams and build a working website from a hand-drawn sketch.

Still, Microsoft believes the changes will improve the experience of people at work in a significant way by allowing them to do tasks easier and less tedious, freeing them up to be more analytical and creative.

MAKE YOUR E-COMMERCE/WAREHOUSE BUSINESS SMARTER

AI is the future. Best Inc. is an industry-leading 3PL and SaaS solutions provider. Our WMS, OMS and ERP are smarter than ever.

ERP:

Intelligent demand forecasting and replenishment recommendations to meet your KPI! Never again have cash tied up in excess inventory or lose sales due to insufficient stock. Your finance team will have the real-time financial insight for information related to your inventory and sales. No more guessing from your quarterly and yearly planning.

WMS:

Our WMS optimizes the management of operations with location-based

process rules for all your warehouses. Your warehouse manager in each warehouse can define zone-based rules, fixed and dynamic picking locations, and clear location capacities. Get real-time visibility into inventory status across warehouses with ease.

OMS:

Super smart shipping strategy! Based on the ship from and to locations and how fast the order needs to get there, we developed system algorithm to provide the best fit of carrier and service for our customers.

As a NASDAQ listed company, we provide top quality services in the U.S., Canada, Europe, Australia, and South Asia.
